

## Optical Fiber Safety Curtain / a Function common to Monitor cutter

Dropping knife shall immediately stop if any part of human body is detected by the light beamed out from front at height of 160mm.

## Extra-large super powered Hydraulic clutch a Function common to Monitor cutter

Proven in the American markets for its quality. World's best with its super power and everlasting performance.

## Precision LM Guide and Ball screw a Function common to Monitor cutter

It keeps the original precise cutting quality after long use without noise or vibration.

## Shear Bolt Safety

Worn-out knife blades or thick and tough material might damage the gear box. This safety measure is one of exclusive functions to Programmable cutter, which breaks at danger to stop operation of cutting knives..

## Effective oil groove

By making oil groove on knife bar, life and cutting quality is enhanced.

## Rotary encoder handle / a Function common to Monitor cutter

Multi-variable rotary encoder enables precise transmission of back gauge.

## Clamp Reverse-pressure Spring Device a Function common to Monitor cutter

A safeguard to prevent clamp from dropping regardless of operation.

### Main features

- Heavy duty design
- Automatic saving function allows you to promptly call any jobs you want.
- Insertion or deletion between processes is available without deleting any post process.
- The ejecting system secures safe post works as it pushes forward finished materials.
- Unnecessary works can be avoided by using skipping function if actual cutting times is less than programmed.
- LED display to confirm entire process will prevent numbering errors.
